

Project Name: Installation of Treatment Plant for Drinking Water (By Reverse Osmosis System)

Project Location: Sharonkhola and Mongla Upazila in Bagerhat District

Project Period: On going

Funded by: Own Fund

Total Budget: BDT 3,600,000.00

Direct Beneficiaries: 4000 person per day

Goal of the Project: Modeling of climate change responsive water supply by refining surface saline water from any available source in the coastal areas.

Objective of the Project:

- Ensure safe drinking water to 4000 coastal people everyday
- Modeling supply of safe drinking water by converting surface saline water
- Establishment of water treatment plants in possible cases

Activities of the Project:

- Set-up of water treatment plant
- Production of water at least with 75% efficiency
- Regular maintenance of Machineries
- Monthly water quality testing
- Water distribution

- Communication with other actors and concerned government authorities
